

AUTOMATIC SOFTWARE TESTING

ABSTRACT OF THE DISCLOSURE

- 5 A computer implemented method of automatic software testing. Status information of a software test running on a test system is stored to a common information point. The common information point is typically on a computer system independent from a computer system running the software test. An operating system on the test system is reinitialized. The operating system may be changed. The
- 10 common information point is queried to determine the status information and the software test is resumed. The testing may be resumed at a point immediately after a last completed test operation.
